Federal Communications Commission
45 L St., N.E.
Washington, D.C. 20554

News Media Information 202 / 418-0500
Internet: <http://www.fcc.gov>
TTY: 1-888-835-5322

DA 22-555
Released May 19, 2022

In coordination with the Cybersecurity and Infrastructure Security Agency and the Federal Emergency Management Agency, and with the concurrence of the New Mexico Statewide Interoperability Coordinator, the Federal Communications Commission (FCC) has deactivated its Disaster Information Reporting System (DIRS) for the New Mexico Wildfires.¹ Communications providers do not need to provide any additional reporting in DIRS in connection with this event. The FCC will, however, continue to monitor the status of communications services and work with providers and government partners as needed to support remaining restoration efforts.

Effective today, no further reports to DIRS are requested in response to the wildfires in New Mexico. Also, effective today, Network Outage Reporting System reporting obligations under Part 4 of the Commission's rules,² which were suspended for providers reporting in DIRS while DIRS was activated, are now again in effect for new network outages for the areas covered by DIRS reporting for the wildfires in New Mexico.

If there are major changes, whether improvements or setbacks, to the status of communications in the affected areas, the FCC asks communications providers to supply that information directly to FCC personnel at the contact information below as events occur. The FCC continues to be available to address emergency communications needs related to the wildfires in New Mexico 24 hours per day, seven days per week through our 24-hour operations center, which can be reached on 202-418-1122 or fccops@fcc.gov. This combination of measures will provide the Commission with the necessary situational awareness as service restoration continues.

The FCC appreciates the cooperation of all the communications providers that voluntarily submitted data to DIRS in the aftermath of the wildfires. In disaster situations, information on the operational status of communications services provides critical situational awareness and supports effective emergency response and restoration efforts. The FCC published its final daily communications status report for the New Mexico wildfires today, May 19, 2022.

For further information, please contact Michael Caiafa of the Public Safety and Homeland Security Bureau's Cybersecurity and Communications Reliability Division at (202) 418-1311.

¹ DIRS is a voluntary, web-based system that communications providers, including wireless, wireline, broadcast, cable and Voice over Internet Protocol providers, can use to report communications infrastructure status and situational awareness information during times of crisis.
